

Call For Prices On Custom-Built Corn Planters

**6 Row
PLANT MASTER 615**

PLANT MASTER has a new corn planter frame designed by Pequea Planter and new row units built by Shoup similar to the MaxEmerge/7000 Plus row unit.

**6 Row 7000 Planter
Liquid Fertilizer
with Hydraulic Markers**

Special Notice:

Most of our 6 Row No-till Planters were originally 8 Row 7000 rigid frame planters. These have a heavier main frame and hitch. After being narrowed to a 6 Row, the finished planter is heavier with a stronger hitch, making an even better No-till Planter, than the John Deere 6 Row 7000 Conservation Planter. Hitch is 2 feet longer and folds back.

**2 Row Planters
3-point or Pull-Type**

**4 Row 3 Point Planter
Without Fertilizer**

**4 Row 7000 Planter
With Dry Fertilizer**

Notice:

- All prices are F.O.B. Pequea Planter Facilities.
- Pequea Planter reserves the right to change prices without notification.

Payment Terms:

- Pay by check, cash or credit card.
- Shipping charges on original orders and back orders.
- Planter sales and rebuilds are subject to a 3% service fee if paid with credit card.

Bring your corn meters to Pequea Planter to have tested on Precision Planting Meter Max Ultra test stand.

**Why spend on a new planter?
A properly reconditioned planter,
with the correct attachments,
should not be outperformed
by a new planter.**

**We offer 5% discount on
Parts & Labor on Planter
overhauls in
summertime.**

With 1.6 bushel hopper, finger meter, lid, seed tube, and drive, without seed sensor	2395.00

PEQUEA PLANTER

Contact Drive Wheel

- Easy to install on most 7000, 7200, and 1750 rigid frame planters
- No chains and sprockets turning whenever planter is raised
- Less chance of chains being run off by corn stalks
- No clutch needed
- Can still use original seed and fertilizer charts
- One wheel enough for up to 6 rows with seed and fertilizer
- Will need hose kit on vacuum planters
- On certain planters may need Floater Kit

RETAIL

Basic kit for 7000 to seed transmission - includes 3' shaft860.00

Call for prices on Floater Kit, call for prices on 7200 and newer planters

PEQUEA PLANTER

Residue Slicer

- Work well in high residue No-till conditions.
- Will also work well under general no-till conditions with little or no residue.
- Wheels on side hold residue while being cut.

RETAIL

Per row.....785.00

- May need extra components

For parts listing check page #48-49.

Rocker arm or walking gauge wheel

For prices check page #20.

John Deere Depth Gauge Wheel

- Side wall of seed trench is firmer, giving sidewall compaction in wet soil conditions.

IH Tire or Inner Reduced Diameter Depth Gauge Wheel

- Side wall of seed trench is crumbled, giving very little side wall compaction.
- Closing Wheels can do a better job closing furrows.
- A good choice if going No-till.

For prices check page #19.

- | | |
|-----------------------------|--|
| 1. Meters | Have tested every 3 or 4 years or 300-400 acres. Change belts & brushes every 3 or 4 years. Take off plastic cover, replace if broke, check fingers. Make sure no build up on fingers. Horse drawn planters we recommend cushion plates. |
| 2. Seed Hopper | Replace if cracked or broke where meter fastens. Particularly 7200. |
| 3. Meter Clutch at Hopper | Make sure spring & cam are loose, oil. Clutch shaft & meter shaft should line up (7000). Drive wings should line up (7200). |
| 4. Parallel Arms | Make sure bolts are tight. Replace bushings & bolts if worn. Worn 7000 parallel arms can be rebuilt. Worn parallel arm & bushings can make a difference in singulation. |
| 5. Seed Tube Guard | Tube guard acts as inside disk scraper, 1" wide new, new guard comes with fins to protect tube. If worn to narrow, disk will rub seed tube. Make sure guard is fasten with 2 roll pins. |
| 6. Seed Tube | Bottom not frazzled or broke. Hook halfway up not broke. |
| 7. Seed Disks | New are 15", change if under 14". Disks should meet 1 1/2" at front. If wanting to use on fertilizer openers, down to 13 3/4". Disk bearings should not be wobbly or tight. |
| 8. Depth Gauge Arm & Wheel | Wheel should rub against disk. Adjust with shim washers or threaded bushing. Replace arm if worn to much, with threaded arm and bushing. Arm can be bent if not worn to much. Bearings not wobbly or tight. |
| 9. Seed Firmer | Adjust tension bolt if needed. Replace if worn. With time firmer will get round on bottom will not do as good job pushing down seed. |
| 10. Closing Arm & Wheels | Spring alright, rubber & wheel half alright. Bearings not wobbly or tight. Bottom of wheels 1 1/2 to 2" apart. If wheel is to sloppy on arm, replace. Not able to shift R or L to much. If to much play replace arm or bushing. If arm has 3/4" hole, drill out, put in eccentric bushing. Arm can be replaced with update handle arm. |
| 11. Insecticide Boxes | Make sure insect. doesn't run through. If it does change roller. Blow out hoses. Clean slot on bottom of meter. Make sure bander is good. |
| 12. Fertilizer | Auger should be center. Check flex spout. Check spout between disks. |
| 13. Fertilizer Openers | New disk 13 1/2". Fert. depth not as critical. Bearings not wobbly or tight. |
| 14. Liquid Pump | Hoses should be pliable. Not dried out or stretched to much. |
| 15. Markers | On 4 row, check cables, make sure alternating properly. Check disk bearings. On 2 & 3 rows, make sure alternating properly, if not, replace plastic tripper if broke or adjust balls. For information check white handbook. Marker lock-in available for 2 & 3 rows. 7200 style markers available for 7000 Planters. |
| 16. Drive Frame Spring | On 2 & 3 rows, broken down pressure spring will give more wheel slippage. |
| 17. Main Clutch | On 4 rows, worn clutch can give skips. Check drive U-pins & bearings. Contact drive available to replace worn out clutch and drive. |
| 18. Chains, Insecticide#41 | 1/2" pin to pin. Chain runs under rear idler & over front idler. Chain tension should be snug. |
| Unit Seed #41 | 1/2" pin to pin. Check spring tension. |
| Drive Wheel 7000 | #2050 1 1/4" pin to pin. With planter raised completely, chain should be as short as possible. Spring not stretched to much. |
| Drive Wheel 2&3 rows | #50 5/8" pin to pin. 2 springs on chain tightner. |
| Fert.& Seed Trans. 2&3 rows | #40 1/2" pin to pin. |
| Fert.& Seed Trans. 7000 | #2040 1" pin to pin. |
| All Chains | Stretched 1/8" on 10" replace. Stretched to much can cause planter to drive harder resulting in slippage. Replace chains if stiff. A faulty chain can make vibration on cornmeter. |
| 19. Chain Idlers | Check all chain idlers & bushings, replace if worn. Oil all chains - Grease all zerks. |
| 20. Coulters | New disks 16". Check springs. Bearings not wobbly or tight. |

- | | |
|-------------------------------|---|
| 1. Planter Level | Bottom of toolbar 20" from ground. Parallel arms should be horizontal. Unit not cocked. Complete planter needs to be level. |
| 2. Seed Spacing | Set seed depth handle front as far as possible. This will lay seed on top of ground. Tie closing wheels and seed firmers up off of ground. Drop planter and drive 20 or 30 ft. For 30" row, measure 17' 5". Count seeds. Your seed count in 17' 5" is how many thousand per acre you're planting. Do this 2 or 3 times, and take average. For 28" row s- 18' 8". For 24" rows - 21' 1 0". (Do all this in field.) |
| 3. Seed Depth | 1 1/2"-2" is ideal. 2"-3" in very dry conditions. Never less than 1 1/2". Depth handle moved front is shallow, back deeper. |
| 4. Dropping Seed | Make sure each unit is dropping seed when starting each field. You or your neighbor may have put a row out of gear to finish the last field. |
| 5. Closing Wheels | Closing wheels shouldn't run in seed trench. If arm or main shank is twisted, bend back. If shank twisted too much, replace. Match rubber, cast, or spike to field conditions. Firm w/o overfirming. |
| 6. No-till Coulter Depth | Close to seed depth, adjust blade depth with rods, or bolt on heavy style. |
| 7. Coulter Blade Alignment | To line up with seed disk, adjust with shims. |
| 8. Unit Down Pressure Springs | Adjust to field conditions. |
| 9. Insecticide | Flow and spread pattern. |
| 10. Fertilizer | Flow and rate. |
| 11. Gauge Markers | Adjust to your row width. On 3-row, disk almost straight. Center row won't plant right with too much mark. In no-till you may need spring tooth harrow and weight or foam markers. 4R7000 markers - Have extra bolt handy for tightening nut. |
| 12. Oil chains daily. | Grease depth wheel arm twice daily. 1 tsp. graphite in each hopper every 6 bushel per row. |

BEFORE STORING YOUR PLANTER

1. Number seed boxes and meters, #1 starting on left.
2. Empty seed, insecticide, and fertilizer boxes.
3. Remove seed meters from hoppers-store in dry place.
4. Never use oil or WD-40 on seed meters.
5. Run water through liquid fertilizer system.
6. Add anti-freeze, run through lines, or blow out with air gun. Release hose tension on squeeze pumps, or remove back plate from 7000 John Blue pump.
7. Pressure-wash planter.
8. After planter has dried, with seed and insecticide boxes removed, spray with diesel fuel or kerosene with 1-4 or 1-5 crankcase oil. Keep off of fiberglass.
9. Coat fertilizer openers and augers with crankcase oil, keep oil off of flex spout.
10. Oil roller chains and grease planter.
11. If planter is stored where bird droppings or dust from blowing feed is a problem, cover with plastic or tarp.
